

The objective of the Electrified Transportation Pro+ Program is to ensure that all individuals working in transportation industries are professionally trained in Electrified Vehicle Systems and Technologies consistently to EV training standards. For those pursuing the 5-year Certification, the training elements must be completed in preparation for the practical and written exams. Level 1 is a prerequisite to pursuing training and optional certification for Levels 2, 3, or 4.

Prerequisite: Completion of Virtual Training for Level 1:

Participants will complete 8 hours of pre-requisite On-Demand EV Technologies Training prior to the Level 1 Hands-on Training, Exams/Certification event. All modules are self-paced and must be completed prior to first day of the hands-on event. Topics include:

- High Voltage Safety and Personal Protective Equipment (PPE) Two 1-hour modules
- High Voltage Vehicle Safety Systems – Four 1-hour modules
- Introduction to HEV/BEV Systems – Two 1-hour modules

At the conclusion of each 1-hour module, a graded quiz will need to be completed to move on to the next module.

We encourage everyone to utilize the optional Adaptive Learning portion of the virtual training delivered through an app-based delivery platform that includes engaging exercises each day to support retention of new concepts (approx. 2–4-minute daily commitment to complete). This is available concurrent to the on-demand modules.

◇ Hands-on Training (2 Days) and optional add-on 5-year Certification (1/2 day)

This component consists of **2 days** of hands-on instruction and content review; optional **1/2 day** to complete Exams to Earn Certification (practical and a 2-hour timed-written). Major Topical Areas for training and exams include:

- High Voltage Safety and PPE
- High Voltage Vehicle Safety Systems
- BEV, EREV, HEV, and PHEV Systems Architecture and Operation
